Page 2

Claims 1-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 is confusion because of the phrase "means for an internally configured and permanently affixed means for". One of the "means for" should be deleted. The terms "formation" and "reformation" are unclear as to what kind of "forming" is occurring, whether it is mechanical (as the specification suggests), electrochemical, or something else. Claim 2 is confusing since the overall article is a belt, but also includes components which are not part of any belt, such as means for separating the three belts and separating collecting spent and unspent reactant from them. Claim 2 also recites that an "internal" loop, implying that the loop is completely inside something, but does not recite what the loop is internal to. Claims 3-24 depend from claims 1 or 2, and would likewise be indefinite. In claim 11 the quotation marks around the word "blow" are unnecessary.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Celeste *et al.* (US 5,512,384) disclose a battery in which the two electrodes and electrolyte collectively form a belt. Hulett (US 6,074,692) and Bönsel *et al.* (US 6,197,147) disclose processes for making electrodes involving belts. Oishi (JP 8-36,997) discloses a process of making a battery separator using a guide belt.

The disclosure is objected to because of the following informalities: The numeral 11 does not appear in figures 2, 4 or 5, as stated in the corresponding sections of the specification.

Art Unit: 1745

The numeral 25 is figure 6 is not found in the specification. The specification does not contain any page numbers or paragraph numbers. Appropriate correction is required.

Claims 1-24 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action. To the extent that the claims are understood, the battery with internal means for forming, reacting and re-forming a current conducting belt; and the device in which two current conducting belts and a central nonconductive belt are separated from each other, while still forming a continuous loop are not disclosed by the prior art cited either herein or by applicants.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen J. Kalafut whose telephone number is 571-272-1286. The examiner can normally be reached on Mon-Fri 8:00 am-4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick J. Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/764,715

Art Unit: 1745

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
